Swing Gate Opener

KNL 2401/2402
KNL 2401PLUS/2402PLUS
KNL 2601/2602

Installation and Operating Manual

- Please read this manual and the enclosed safety materials carefully before install and use.
- Periodic checks of the opener are required to ensure safe operation.
- For residential use only.

Safety Installation Information

1. READ and FOLLOW all instruction.
2. The gate opener is intended for use with Class I vehicular swing gates.
   Class I denotes a vehicular gate opener (or system) dwellings, or a garage or parking area associated therewith.
   Install the gate opener only when the opener is appropriate for the construction and the usage class of the gate.
3. Gate opening system designers, installers and users must take into account the possible hazards associated with each individual application. Improperly designed, installed or maintained systems can create risks for the user as well as the bystander. Gate system design and installation must reduce public exposure to potential hazards. All exposed pinch points must be eliminated or guarded.
4. A gate opener can create high levels of force during normal operation. Therefore, safety features must be incorporated into every installation. Specific safety features include safety sensors.
5. The gate must be properly installed and work freely in both directions prior to the installation of the gate opener.
6. The gate must be installed in a location so that enough clearance is provided between the gate and adjacent structure when opening and closing to reduce the risk of entrapment. Swinging gates shall not open into public access areas.
7. The opener is intended for use only on gates used for vehicles. Pedestrians must be supplied with a separate access opening. The pedestrian access opening shall be designed to promote pedestrian usage. The pedestrian access shall be located such that persons will not come in contact with the moving vehicular gate.

8. Pedestrians should never cross the pathway of a moving gate. The gate opener is not acceptable for use on any pedestrian gate. Pedestrians must be supplied with a separate pedestrian access.
9. For an installation utilizing non-contact sensors (safety sensors), see product manual on the placement of non-contact sensors (safety sensors) for each type of application.
   a. Care shall be exercised to reduce the risk of nuisance tripping, such as when a vehicle trips the safety sensor while the gate is still moving.
   b. One or more non-contact sensors (safety sensors) shall be located where the risk of entrapment of obstruction exists, such as the perimeter reachable by a moving gate or barrier.
10. Never mount any device that operates the gate opener where the user can reach over, under, around or through the gate to operate the controls. Controls are to be placed at least 6’ (1.8m) from any part of the moving gate.
11. Controls intended to be used to reset an operator after 2 sequential activations of the entrapment protection device or devices must be located in the line of sight of the gate, or easily accessible controls shall have a security feature to prevent unauthorized use. Never allow anyone to hang on or ride the gate during the entire travel of the gate.

12. Each gate opener is provided with two safety warning placards. The placards are to be installed on the front and back of the gate where they are plainly visible. The placards may be mounted using cable ties through the four holes provided on each placard. All warning signs and placards must be installed where visible in the area of the gate.

13. To AVOID damaging gas, power, or other underground utility lines, contact underground utility locating companies BEFORE digging. SAVE INSTRUCTION.

14. Do not permit children to play on or around the gate and keep all controls out of their reach.

The value of the maximum weight and width can only be applied when the product is installed properly on a gate with smooth conditions and followed the installation procedure.

**Features:**

- Soft start and soft stop
- Emergency release key in case of power failure
- Dual/Single gate running mode
- Adjustable opening/closing interval between master and slave gate
- Stop/Reverse in case of obstruction during gate opening/closing.
- Built in adjustable auto-close (0-99 seconds)
- Built in max. Motor running time (MRT) adjustable for multiple safety protection (1-50 seconds)
- Digital display indicates the running situation and setting menu
- Reliable electromagnetism limit for easy adjustment
- Can be equipped with a wide range of accessories
Installation Overview

Single Gate Overview
Pull-to-Open Gate

**WARNING**

To prevent SERIOUS INJURY or DEATH, at least one non-contact sensor should be located where the risk of entrapment or obstruction exists.

---

Left-Hand Gate

Right-Hand Gate
Step 1 — Prepare for Installation

There are two installation types for the gate opener, Pull-to-Open and Push-to-Open. In the Push-to-Open installation, gate opens out from the property. A Push-To-Open Bracket (PSO part) is required to be used for each gate.

**NOTE:** Ensure the gate does not open into public areas.

The gate opener is mounted to the gate and to the gate post. Both round and square posts can be used because the Post Brackets are curved. When mounting the Post Brackets, use bolts long enough to
pass through the entire post. Four M10 x 200 bolts are included. Concrete anchors are not provided.

When mounting the Post Brackets to wooden posts, a larger-size washer or metal plate should be used between the bolts and the wooden post to ensure the stability of the fastening hardware. If the post is smaller than 6" diameter or square, it should be made of metal and set in cement to ensure its stability.

![Diagram of Post Bracket installation](image)

**Step 2 — Install the Gate Opener on the Gate**

The position of Post Bracket is very important. The following illustrations and tables are required to determine the proper mounting position for the Post Bracket. The tables show the maximum opening angle of the gate for a given A and B. For example, if A is 15cm and B is 20cm, the maximum opening angle of the gate is 110°.

**Pull-to-Open Installation — Gate in Closed position (Moving-Rod is extended)**

</tbody>
</table>
Push-to-Open Installation — Gate in Closed position (Moving-Rod is retracted)

1. Place the post pivot bracket between the two post brackets. Insert the M10 x 30 bolt through the center hole of the post bracket and post pivot bracket as shown. Place a $\phi$ 10 washer, $\phi$ 10 lock washer and M10 nut on the bottom of the bolt and hand tighten.

2. Attach the gate bracket and post bracket assembly to the opener by inserting a clevis pin. Secure the clevis pins using the hairpin clips.
3. Open the release hole plug on the top of the gate opener, insert the release key, and turn the key 90° clockwise. This releases the motor and allows the push-pull rod to be manually extended and retracted. To restore normal operation, turn the key 90° counterclockwise.

4. With the opener fully retracted and with the gate in the fully open position (for Pull-to-Open installation) or fully closed position (for Push-to-Open installation), place the gate opener with the Post Bracket Assembly and Gate Bracket on the gate post and the gate. Position the Post Bracket Assembly and Gate Bracket so that the gate opener is level. While holding the gate opener in the level position, temporarily secure it with two C-clamps.

5. Make sure that there is a minimum clearance of 2.5cm between the gate and the opener and that the opener and the Post Pivot Bracket are not binding in both the gate-open and gate-closed positions. If there is not at least 2.5cm of clearance or if the opener and the Post Pivot Bracket are binding, rotate the Post Pivot Bracket and/or move the Post Bracket Assembly to obtain the minimum clearance and eliminate the binding. When the minimum clearance has been obtained and any binding has been eliminated, place the M8 x 30 bolt through the aligned holes in the Post Bracket and the Post Pivot Bracket.
Gate in the CLOSED POSITION

Be sure gate opener and bracket are not binding

Push-to-Open

2.5cm (1”) minimum

Gate in the OPEN POSITION
6. Mark bolt hole locations on the post for the Post Bracket Assembly and on the gate for the Gate Bracket by placing a mark on the post and gate through the center of each slot in the brackets.

7. Remove the Post Bracket Assembly and the Gate Bracket by taking off the C-clamps.
8. Drill 10.5 mm diameter holes through the post and the gate at the marked locations.
9. Attach the Post Bracket Assembly to the gate post by inserting four M10 x 200 bolts through each Post Bracket and the drilled holes in the gate post. Fasten each bolt with one M10 washer, one M10 lock washer, and one M10 nut.
10. Attach the Gate Bracket to the gate by inserting two M10 x 75 bolts through the Gate Bracket and the drilled holes in the gate. Fasten each bolt with one M10 lock washer, and one M10 nut.
11. Cut off any part of the bolts that extend beyond the tightened nuts.
12. With the gate opener fully retracted and with the gate in the fully open position (for Pull-to-Open installation) or fully closed position (for Push-to-Open installation), attach the gate opener to the Post Bracket Assembly and the Gate Bracket by inserting a clevis pin through the gate opener and the Post Pivot Bracket and another clevis pin through the gate opener and the Gate Bracket. Secure each clevis pin with a hairpin clip.
13. Open the release hole plug on the top of the gate opener, insert the release key, and turn the key 90° counterclockwise. This restores normal operation.

**Mounting the Control Box**

**Step 1**
To install the control box use the deck screws (not provided). Ensure the control box is installed in a secure surface and at least 100 cm (40 inches) above the ground to protect it from rain, snow, etc. which probably cause damage to the control box.

⚠️ **Warning:** Before connecting the AC power cable to the control box, check the plug of power cable is disconnected from AC power socket.

**Step 2**
Insert the power cable and cable of the first gate opener through the front strain relief and into the control box by loosening the strain relief screw located in the leftmost of outside bottom of the control box and feeding the cables into the control box. Check the length of cables is long enough to their respective terminal block in control box. Retighten the sealing nut so that cables are well locked.

<table>

</tr>
</thead>
<tbody>
<tr>
<td>Lock Nut</td>
<td></td>
</tr>
<tr>
<td>Hub</td>
<td></td>
</tr>
<tr>
<td>Sealing Nut</td>
<td></td>
</tr>
</tbody>
</table>

**CAUTION:** Install the Control Box in a well ventilated place protected against rain and sunlight. **NOTE:** It is strongly suggested that the control box should be mounted in the side of Master Gate (Gate 1), so that the electric lock can be installed correctly and work properly (See Page 9).

**Step 3**
Insert the cable of the second gate opener and alarm lamp cables into the control box through middle strain relief. Then repeat step 2.

**Step 4**
Insert other cables into the control box through rightmost strain relief. Then repeat step 2.
NOTE: Only motor cables (1.5m length) are provided. Other cables are subject to site installation requirement and not provided.

CAUTION: Make sure the cable outlet hole in the Control Box is always down during installation so as to drain off the water.

Connecting of the control board

Actuator 1 & Actuator 2

Connect the actuator cable to the control box as shown in the following illustration.

Note: Pull-to-Open and Push-to-Open use different wiring schemes.

It is recommended that Gate Opener 1 is installed in the Master Gate, and Gate Opener 2 is installed in the Slave Gate.
Alarm Lamp (optional)

The red wire of the alarm lamp should be inserted into either LAMP (#11) terminal, the white wire into the other one (#12).

Back-up Battery (optional)

The “24V+” of the battery should be wired to the BAT+ (#13) terminal, “24V-” should be wired to “BAT-” (#14) terminal.

*Recommend strongly to use the controller KNL118 (WA4004) to connect Battery with battery’s Terminal of control board if the battery is used as the primary power supply in system (such as SOL PLUS KIT). Please refer to the user manual of control KNL118 (WA4004) separated.*

Photocell Beam System (PBS) (optional)

Use a 2-core cable to connect the “- ~” terminal of the photocell’s emitter to the “14” terminal, the “+ ~” terminal to the “9” terminal. Also the “- ~” and “+ ~” terminals of the photocell’s receiver should be connected to the “14” and “9” terminals in parallel.

Use another 2-core cable to connect the “COM” terminal of the receiver to the “17” terminal, the “NC” terminal to the “18” terminal.

Push Button (optional)

The red wire should be inserted into either O/S/C terminal, the white wire into the other one.

Loop Detector (optional)

First insert the LOOP DETECTOR BOARD into the CONTROL BOARD, and then connect the LOOP...
DETECTOR to the control board. Detailed instruction please refers to the manual instruction of LOOP DETECTOR separated.
Exit Wand (optional)

First insert the EXIT WAND BOARD into the CONTROL BOARD, and then connect the EXIT WAND to the control board. Detailed instruction please refers to the manual instruction of EXIT WAND separated.

Electric Lock (optional)

The electric lock should be wired to the “LOCK” terminal.

External Receiver (optional)

The BROWN wire of the external receiver should be connected into the “19” terminal.
The BLACK wire of the external receiver should be connected into the “20” terminal.
The RED wire of the external receiver should be connected into the “9” terminal.

Wired Keypad (24VDC) (optional)

The RED wire of the wired keypad should be connected into the “9” terminal.
The BLACK wire of the wired keypad should be connected into the “14” terminal.
The WHITE wire of the wired keypad should be connected into the “19” terminal.
The BLUE wire of the wired keypad should be connected into the “20” terminal.

Solar Panel (optional)

Please refer to the manual instruction of solar panel and controller (KNL118) separated.

How to learn or erase the remote

Learn the remote

Press and release the learn button, the LED will display “Ln”, then press the key in the remote twice in 2 seconds, the LED will flash “Ln” for 4 seconds then back to “- -”. Now the remote has been learnt successfully.

WARNING: Activate the opener only when gate is in full view, free of obstruction and properly adjusted. No one should enter or leave gate area while gate is in motion. Do not allow children to operate push button or remote. Do not allow children to play near the door.
Your swing gate opener receiver and remote control transmitter are set to a matching code. If you purchase additional remote controls, the gate opener must be programmed to accept the new remote code.

Erase all the remote codes

Press and hold the learn button until the LED display back to “- -”. Now all remote codes have been erased.

Caution: If you lose one of any remote control, please learn all other remote controls to have a new code for safety.
Setting of the Control Board

1. Check again for completed and correct assembly of your swing gate opener and gate. Plug the Power Cord into the nearest AC outlet. The Digital Display on the Control Board will flash with "--". The unit is in standby.

2. Single/Dual Gate Set
Press and hold the "FUNC" button for more than 4 seconds. The Digital Display will indicate "P1". Gate opener is on the SINGLE/DUAL Gate setting. Press the "INC" and "DEC" buttons respectively to following modes:

- "01" shown in Digital Display, it is Single Actuator 1 (Gate 1) mode.
- "10" shown in Digital Display, it is Single Actuator 2 (Gate 2) mode.
- "11" shown in Digital Display, it is Dual actuator mode.

Press the "FUNC" button to store the data when the single or dual gate is chosen. The Digital Display will indicate "P2". Now single/dual gate set is finished.
(Factory set is "11")

3. Master/Slave Gate Set
When Digital Display indicates "P2", the gate opener is on the Master/Slave Gate Setting. Press the "INC" and "DEC" Buttons respectively to follow modes:

- "01" shown in Digital Display, which means Gate Opener 1 (right-hand side) as Master one
- "10" shown in Digital Display, which means Gate Opener 2 (left-hand side) as Master one

Press the "FUNC" button to store the data when the master/slave gate is chosen. The Digital Display will indicate "P3". Now Master/Slave Gate Set is finished.
(Factory set is "01")

4. Set the Open Interval between Master and Slave Gate
When the Digital Display indicates "P3", the gate opener is on the Open Interval between Master/Slave Gate Setting.

The open interval can be adjusted by pressing the "INC" and "DEC" Buttons respectively. The Digital Display will show "0"-"9", which indicates the interval time. "0" means the Master and Slave gates open simultaneously. "1" means the Master Gate starts to open 1 second before Slave gate starts to open. Max. open interval is 9 seconds. Each time you press and release the "INC" button, the figure increases by 1, and the Master gate starts to open 1 more second earlier. Each time you press and release the "DEC" button, the figure decreases by 1, and the interval decreases by 1 second.
(Factory set is 3 seconds)
Press the “FUNC” button to store the data when the open interval is set. The Digital Display will indicate “P4”. Now Open Interval Set is finished.

5. Set the Close Interval between Master and Slave Gate
When the Digital Display indicates “P4”, the gate opener is on the Close Interval between Master/Slave Gate Setting.

The close interval can be adjusted by pressing the “INC” and “DEC” buttons respectively. The Digital Display will show “0”-“9”, which indicates the interval time "0" means the Master and Slave gates open simultaneously. "1" means the Slave Gate starts to close 1 second before Master gate starts to close. Maximum close interval is 9 seconds. Each time you press and release the “INC” button, the figure increases by 1, and the Slave gate starts to close 1 more second earlier. Each time you press and release the “DEC” button, the figure decreases by 1, and the interval decreases by 1 second. (Factory set is 3 seconds)

Press the “FUNC” button to store the data when the close interval is set. The Digital Display will indicate “P5”. Now Close Interval Set is finished.

6. Adjust the Obstruction Sensitivity/Stall Force
When the Digital Display indicates “P5”, the gate opener is on the Stall Force Adjustment.

Without a properly installed safety reversal system, person (particularly small children) could be SERIOUSLY INJURED or KILLED by a closing gate.

*Too much force on gate will interfere with proper operation of safety reversal system.
*NEVER increase force beyond minimum amount required to close gate.
*NEVER use force adjustments to compensate for a binding or sticking gate.
* If one control (force or travel limits) is adjusted, the other control may also need adjustment.
* After ANY adjustments are made, the safety reversal system MUST be tested. Gate MUST BE TESTED. Gate MUST reverse on contact with a rigid object.

The opener is equipped with an obstruction sensing feature. If the gate encounters an obstruction the opener will automatically reverse direction and stop. Based on the length and weight of the gate it may be necessary to make force adjustments. The force adjustment should be high enough that small objects such as branches or wind will not cause nuisance interruptions but low enough to prevent serious injury to a person or a vehicle.

6-a Adjust Stall Force of Gate Opener 1
Now we adjust the stall force of gate 1

The stall force of gate opener 1 is adjusted by pressing “INC” and “DEC” buttons respectively. The Digital Display will show “1”-“9” which indicates the stall force levels. “1” means the minimum force, and “9” is the maximum force. Each time you press and release the “INC” button, the figure increase by 1, and the force increases to a higher level. Each time you press and release the “DEC” button, the figure decreases by 1, and the force decreases to a lower level. Press “FUNC” to store the data. The Digital Display will indicate “P6”. Now stall force of gate opener 1 is finished.
(Factory set is Level 3)

6-b Adjust Stall Force of Gate Opener 2
When the Digital Display indicates “P6”, you can adjust force of gate opener 2.
Please perform the same procedure as gate opener 1 (6-a).
Press the “FUNC” button to store the data when stall force of gate opener 2 is set. Then “P7” will be shown on the Digital Display.

**NOTE:** You may need to increase the stall force in cold weather due to increased resistance from gate hinges. The gate opener’s opening/closing force is adjusted automatically according to stall force adjustment.
7. Adjust the Max Motor Running Time (MRT) of the MOTOR for gate opener
The maximum running time of the MOTOR can be set to make the motor stop running after a specified period even if the limit switch is invalid or the clutch is detached.

7-a. Adjust the MRT of MOTOR1
When the Digital Display indicates “P7”, you can adjust the MRT of MOTOR1.
The MRT of MOTOR1 is adjusted by pressing “INC” and “DEC” buttons respectively. The Digital Display will show “01”-“50” which indicates the MRT of MOTOR1 from 1 to 50 seconds.
You can hold pressing the “INC” or “DEC” button for more than 1 second to speed up the setting. Press the “FUNC” button to store the data when you finish setting. The Digital Display will indicate “P8”.
(Factory default setting is “40” seconds)

7-b. Adjust the MRT of MOTOR2
When the Digital Display indicates “P8”, you can adjust the MRT of MOTOR2.
Please perform the same procedure as adjusting MOTOR1 (7-a).
Press the “FUNC” button to store the data when you finish setting. The Digital Display will indicate “P9”. Now MOTOR2 adjustment is finished.

8. Set the Safety Photocell Beam System (PBS) (Optional)
When the Digital Display indicates “P9”, the gate opener enters PBS set mode.
You can press and release the “INC” or “DEC” button to set or shut off the PBS function. The Digital Display indicates “11”, the PBS is available. The Digital Display indicates “00”, the PBS is null.

Note: If the “11” is be set, the gate opener won’t work until the PBS system is equipped. The PBS system works only when gate opener is closing. The gate opener will return to its open position when the obstruction blocks the beam from photo eye.

Press the “FUNC” button to store the data when the PBS is set. The Digital Display will indicate “PA”.
(Factory set is “00”)

9. Set the Automatic Closing Time
When the Digital Display indicates “PA”, the gate opener enters into the setting of automatic closing time mode. Press and release the “INC” or “DEC” button, the Digital Display will show a “01”-“99” which indicates the current automatic closing time. The minimum time is 1 second, 99 seconds maximum.
Each time you press and release the “INC” button, the figure increases by 1, and the timing increases by 1 second. Each time you press and release the “DEC” button, the figure decreases by 1, and the timing decreases by 1 second. When the timing is “00”, the automatic closing function is shut off and the gate will stay open.
(Factory set is 60 seconds)
Press the “FUNC” button to store the data when the desired automatic closing time is set. The Digital Display will indicate “Pb”

10. Set the Period of Soft Start
When the Digital Display indicates “Pb”, the gate opener is ready for setting period of soft start.
You can press the “INC” or “DEC” button to set the period of soft start. There is 1-9 seconds available in setting. Press the “FUNC” button to store the data when the period is set. The Digital Display will indicate “PC”.
(Factory set is 3 seconds)

11. Set the Fast Running Period (FRP) to Achieve Soft Stop Function (SPP)
When the Digital Display indicates “PC”, the Fast Running Period for opening or closing gate is adjustable by pressing “INC” and “DEC” buttons respectively, and the Soft Stop Function is achieved simultaneously.
The Soft Stop means the gate opener runs at slow speed during the last period before the gate completely closes. The Soft Stop Period is unavailable by direct adjust but available through adjusting the Fast Running Period.

There are two running speeds designed in program, i.e. Fast Running Speed and Soft Running Speed. The Fast Running Period is adjustable from 1 to 28 sec. Factory default setting is 15 sec.

Since the GATE OPENING OR CLOSING RUNNING PERIOD (GRP) = SOFT START PERIOD (STP) + FAST RUNNING PERIOD (FRP) + SOFT STOP PERIOD (SPP), the SPP could be extended by shortening the FRP when the GRP and STP are fixed. In other words, SPP = GRP – STP – FRP.

Similarly, the Soft Stop Period (SPP) can be shortened through extending the Fast Running Period (FPP).

E.g. When the Soft Start Period (STP) is set at 3 sec, and the GRP is 23 sec, how can we get 4 sec of Soft Stop Period (SPP) to meet the requirement? The answer is clear, i.e. we may set the Fast Running Period (FRP) at 16 sec (23 – 3 – 4 = 16 sec).

12. Return to Factory Set
When the Digital Display indicates “Pd”, press and release the “INC” or “DEC” button. All data will return to factory set, the Digital Display indicates “dF”.

13. If all of data is set and no other change needed, press “FUNC” Button. “- -” appears on the Digital Display, and the opener enters standby mode.

Indicate Illustration on the Digital Display When Gate Opener is Running
The left image on Digital Display symbolizes motor of gate opener 2 when the gate opener is running. The right image on Digital Display symbolizes motor of gate opener 1.

When the motor is run to gate -open direction or gate -close direction, the image on Digital Display indicates “n” or “u” respectively.

When the motor is not running, the Digital Display indicates “- -".

Adjusting the Limit Switch
Adjusting the Limit Switch of Actuator 1
The position of Limit Switch A was fixed in factory, do not adjust it again.
Plug on the power to running gate opener, use a screwdriver to loose the screw of Limit Switch B, slide Limit Switch B to the desired closed position and fix it.
Limit setting for Gate 1 is finished now.

NOTE: Always place the magnetic ring between the Limit Switch A and B.
**Adjusting the Limit Switch of Actuator 2**

The position of Limit Switch C was fixed in the factory, do not adjust it again. Use a screwdriver to loosen the screw of Limit Switch D, slide Limit Switch D to the desired closed position and fix it. Limit setting for Gate 2 is finished.

**NOTE:** Always place the magnetic ring between the Limit Switch C and D.

**NOTE:** The magnetic ring in the moving rod can be manually placed between both Limit Switches in each actuator. See Page 24 Emergency Release.

---

**How to Operate**

The user may operate the opener once all adjustment settings are finished.

With the gate in its closed position, press and release the remote control, the gate will move to the programmed opening position and stop.

With the gate in its opened position, press and release the remote control, the gate will move to the programmed closing position and stop.

While the gate is moving, press and release the remote control, the gate will stop moving immediately. The next command from the remote will reverse the gate direction and the gate will stop at its programmed opening/closing position.

The gate will stop in case of obstruction during opening. The command from the remote control will reverse the gate direction and the gate will stop at its programmed closing position.

The gate will reverse in case of obstruction or stall force during closing, and it will move to the programmed opening position.

**NOTE:** The Obstruction Sensitivity/Stall Force is adjustable in 9 levels.

---

**Maintenance**

⚠️ **Warning:** *Disconnect power before servicing.*

1. Using a clean, dry cloth, wipe the gate opener shaft, and then apply a silicone spray to reduce its friction. In cold climates where temperatures reach 1°C (30°F) or less, spray silicone on the actuator every 4~6 weeks to prevent freeze up.
2. Regularly check gate hinges to make sure gate is swinging smoothly and freely. Grease hinges if needed.
3. Check your installation periodically, as hardware and posts will shift. Brackets may need to be adjusted or hardware may need to be tightened.
4. Maintain the area around your gate. Keep the areas free of objects that can prevent the gate swinging freely.

**NOTES:**

1. *Inspection and service should always be performed anytime a malfunction is observed or suspected.*
2. It is suggested that while at the site voltage readings be taken at the operator. Using a Digital Voltmeter, verify that the incoming voltage to the opener it is within ten percent of the opener’s rating.

**Trouble Shooting**

1. Opener does not run. Digital Display indicator is not on.
   * Check if all motor are properly connected and color coded. Make sure the AC input is connected.
   * Check if the fuse in control board is bad.

2. Opener powers up but does not run.
   * Arm cable loose or disconnected. Verify that all of the wires going to the arm are secure and that the connector is properly mated to the header.
   * Arm is incorrectly installed. Disconnect the motor housing from the arm and verify that the arm moves freely.
   * Gate is excessively heavy or hinges are bad. Verify that the gate is within the ratings for this product. Disconnect the arms and verify that both gates swing easily. Lubricate or replace hinges as necessary.
   * Bad control board. Call technical support for help with replacement parts.

3. Gate stops immediately after it starts moving.
   * Obstruction sensed. Check safety devices and gate for obstructions.
   * Force set too low. Adjust FORCE setting until gate completes a full open/close cycle without stop. The force setting may need to be adjusted in cold weather, as the gate will not move freely.
   * Check if the MRT period is too short. Refer to page 21.
   * Incorrect power.

4. Gate opens but does not close.
   * Photocell (PBS) is set in Control Board but is not equipped (optional). Please cancel the PBS set. Refer to page 22.
   * Obstruction blocking close photo eyes, Check eyes for alignment and verify all connections and operation for safety devices.

5. Gate ignores the limit switches
   * Check that the limit switch is not faulty
   * Check that wires to the limit switch are not shorted.
   * Ensure that the motor cable is away from sources of electrical interference, such as electric fences, power lines etc.

6. Gate opens, closes or stops on its own
   * Ensure that the key for manual release is in the lock position. Refer to page 24.

According to Waste of Electrical and Electronic Equipment (WEEE) directive, WEEE should be separately collected and treated. If at any time in future you need to dispose of this product please do NOT dispose of this product with household waste. Please send this product to WEEE collecting points where available.
Quick-Setting Guide

Power On

LED indicates “- -”

Press FUNC. for more than 4 seconds.

LED shows “P1” for
Single/Dual Gate setting.
Modify? (FTY set Dual Gate)

YES

Press “INC” or “DEC” to adjust the mode. “01” is Gate 1, “10” is Gate 2, “11” is Dual Gate.

NO

Press FUNC.

After modification

LED shows “P2” for Master/Slave
Gate setting.
Modify? (FTY set Gate 1 as Master)

YES

Press “INC” or “DEC” to set “10” for
Gate 2 as Master.

NO

Press FUNC.

After modification

LED shows “P3” for Open Interval
setting.
Modify? (FTY set 3 seconds)

YES

Press “INC” or “DEC” to adjust the
interval. “0-9” seconds.

NO

Press FUNC.

To be continued …
LED shows “P4” for Close Interval setting. Modify? (FTY set 3 seconds)

YES

Press “INC” or “DEC” to adjust the interval. “0-9” seconds.

NO

After modification

Press FUNC.

LED shows “P5” for Stall Force of Gate 1 setting. Modify? (FTY set 3 level)

YES

Press “INC” or “DEC” to adjust the force. “1-9” level.

NO

After modification

Press FUNC.

LED shows “P6” for Stall Force of Gate 2 setting. Modify? (FTY set 3 level)

YES

Press “INC” or “DEC” to adjust the force. “1-9” level.

NO

After modification

Press FUNC.

LED shows “P7” for MRT of MOTOR1 setting. Modify? (FTY set 40 seconds)

YES

Press “INC” or “DEC” to adjust the time. “1-50” seconds.

NO

After modification

Press FUNC.

To be continued …
LED shows “P8” for MRT of MOTOR2 setting. Modify? (FTY set 40 seconds)

YES

Press “INC” or “DEC” to adjust the time, “1-50” seconds.

NO

Press FUNC.

LED shows “P9” for Photocell setting. Modify? (FTY set NOT)

YES

Press “INC” or “DEC” to set “11” for photocell function.

NO

Press FUNC.

LED shows “PA” for Auto Close setting. Modify? (FTY set 60 seconds)

YES

Press “INC” or “DEC” to set “0-99” seconds.

NO

Press FUNC.

LED shows “Pb” for Period of Soft Start setting. Modify? (FTY set 3 seconds)

YES

Press “INC” or “DEC” to set “1-9” seconds.

NO

Press FUNC.

Note: If “11” is set, the gate opener won’t work until the PBS system is equipped. The PBS system works only when the gate opener is closing. The gate opener will return to its open position in case the obstruction blocks the photo eye.

To be continued…
LED shows “PC” for Fast running period setting to get the Soft stop period simultaneously. (FTY set 15 seconds)

YES

Press “INC” or “DEC” to set. 1-28 seconds.

NO

After modification

Press FUNC.

LED shows “Pd”. Does all data return to FTY set?

YES

Press and release “INC” or “DEC”, the Digital Display indicates “dF”.

NO

After modification

Press FUNC.

LED shows “-.-”. All settings have been done and the unit enters standby mode.

---

**IMPORTANT NOTICE TO USERS:**

To maintain the proper working condition of your new automatic gate opener, we recommend that you spray the actuator shaft every 4-6 weeks with silicone. This will keep the actuator working freely and prevent problems.
